2022 EUHA Congress: Convention programme

(Frankfurt/Mainz, 12 August 2022) **Here it is: the programme of the 66th International Congress of Hearing Aid Acousticians has been released, debuting a science symposium on Wednesday morning.**

The **opening ceremony** of the Congress will this year be held on **Wednesday, 12 October 2022, at 10 a.m.** Prof. Dr. Michael Hüther from the Cologne-based German Economic Institute will give the keynote address. This will be followed by the science symposium starting at 11 a.m. First-hand studies and research on topics relevant to hearing aid acoustics are on the agenda. The presentation will culminate in the award ceremony for this year's EUHA Sponsorship Award as part of the symposium. The findings of the paper winning the sponsorship award offered by the Research Association of German Hearing Aid Acousticians (FDHA) will also be shared. This will give Congress participants the opportunity to get an update on the current state of research.

Programme of specialist lectures

More than twenty-five expert lectures and six tutorials from the fields of Research & Science, Practical Application, Marketing & Communication, Public Health Politics & the Future will be featured in the specialist programme of the 2022 EUHA Congress. Leading speakers from Germany and abroad will be sharing current knowledge, invite you to stay up to scratch, and exchange ideas. A series of public health policy topics with particular relevance to current times has again been scheduled for Thursday.

The lectures in the scientific programme will offer new perspectives on topics such as speech intelligibility in people with asymmetric hearing loss or after CI fitting. Other presentations will be dealing with recognising one's own voice or improved fitting for patients with severe to profound hearing impairment. How does the target group of elderly people find out about hearing aid technology and what do they think about tools such as remote fitting? This issue will also be discussed. There will be an overview of 25 years of paediatric acoustics. Another focus will be on room acoustics. These and other topics, such as automated in-situ measurement, are part of the programme, which is available at www.euha.org/en/ now.

Tutorials

The tutorials held in the Convention Center will be offering expert knowledge presented in a lively manner. This year, participants can look forward to topics such as percentile analysis, additive earmould manufacturing, and coaching skills for executives. In addition, tutorials on aural rehabilitation as well as on hearing implants will be offered.

Future Friday

The third day of the event, Friday, 14 October 2022, is dedicated to forward-looking topics relevant to our industry. What will the hearing systems of the future look like? How will they perform? What are trends that will influence the future? What does the hearing systems industry need to prepare for? This part of the programme includes input from the Hearing Instruments Industry and from the European Union of Hearing Aid Acousticians. Four

renowned speakers will be dealing with these topics in their exciting keynote speeches starting at 2 p.m.

It's worth taking a look at the Congress programme by visiting www.euha.org/en/! Information on the Industry Exhibition is available at www.ausstellung-euha.org/en/!
