

T1: "Implantable hearing systems: Overview of CI provision in the partner country Switzerland and presentation of recent cases from practice" (in German only)

Lecturers: Prof. Dr. Norbert Dillier, Zurich (Switzerland); Michael Willenberg, Leipzig

Presenter: Eva Keil-Becker, Koblenz

The tutorial will focus on the presentation of interdisciplinary approaches and real-life case descriptions. In the first part of this year's "Implantable hearing systems" tutorial, the "hearing pioneer" Prof. Dr. Norbert Dillier from Zurich University Hospital will talk about the beginnings, the current status, and the development of CI systems and CI care in Switzerland, the EUHA partner country.

In the second part, Michael Willenberg as a representative of the EUHA Expert Group on *Hearing Implants* will present case studies* from the daily routine provided by participants (sent in or reported in the tutorial), and invite participants to discuss them. We will focus on a description of the working method along the lines of the EUHA Guideline on "Implanted hearing systems" presented in 2022.

(* Age, tone and speech audiogram, course (acute/progressive), ear surgery yes/no)
