## **Bluetooth Auracast in practice**

In this presentation, you will learn about the latest findings on the practical use of Bluetooth Auracast for people with hearing loss. In addition to the use of hearing aids and assistive devices, the deployment as an assistive listening system in meeting rooms will be discussed in detail, and the question of whether Auracast can replace audio inductive hearing loop systems will be raised. The findings and recommendations presented are based on extensive tests with test subjects carried out by Pro Audito Switzerland, the leading organisation for people with hearing loss in Switzerland, in collaboration with the Federal Institute of Technology Zurich (ETH Zurich).
