Digital EUHA Spring Conference 2025 Successful start: now on demand

(Münster, 31 March 2025) **The EUHA Digital Spring Conference 2025 kicked off on 28 March 2025. The international event runs until 31 May 2025 and is available 24/7 on demand. There was a special kick-off at the beginning of the conference. Stefanie Fehr-Hoberg and Hannah Wolf presented news on the topics of stress management and dealing with the current challenges we all face.**

EUHA Vice President Eva Keil-Becker welcomed the participants and emphasised the opportunities offered by the EUHA Digital Spring Conference. 'You can individually select the topics that interest and inspire you!' she said, pointing out the various subject areas.

Science & research

The range of topics in the 'Science & Research' area is broad. It is about the 'Influence of an in-situ measurement on the transmission behaviour of hearing aids' and 'How competing conversation partners shape the acceptable noise level and masking mechanisms'. In addition, the topics 'Challenges of the comparability of SNR measurements in hearing system research' and 'Tinnitus management and the possibilities of digital applications' will be presented.

Practice

The 'Practice' section covers very different aspects of hearing acoustics. 'Occlusion-free earmould models' are presented as an innovation for a natural hearing experience. And it's all about special materials, high-performance polymer earmoulds of the new generation. The material is the be-all and end-all for an accurately fitting impression. That's why we explain which impression material is the right one for which situation.

The quality of modern hearing technology is measured on the one hand by hearing success, but the design also plays a role. Various types of varnish, their surface function and UV curing will be presented at the EUHA Digital Spring Conference.

On the subject of hearing effort, there will be tips on support for hearing system customisation. 'Optimising streaming sound as needed in practice' is another practical topic, as is improving the acceptance of initial fittings.

Marketing & communication

The 'Marketing & Communication' section will focus on the 'target group of the future' and present a 'central platform for product data and more'.

Participants will also have the opportunity to watch various videos from the sponsors and find out about innovations in the areas of fitting, earmoulds, the latest hearing system technology and training.

The abstracts, programme and tickets are available at euha.org/def-en
