Next Level CI Care: More than just an implant

Our speaker, Dr. Sylvia Meuret, provides information on current developments in the field of early childhood hearing disorders and cochlear implant treatment. From this, we derive the special requirements for CI audiologists who wish to work in this field and outline tasks and forms of cooperation in the context of the “EUHA Guideline on Implantable Hearing Systems in Hearing Acoustics.”

Michael Willenberg will supplement the tutorial in line with these guidelines. He will show that, for successful CI treatment in children and adolescents, other factors beyond the purely technical perspective are also important.
