of Automation

Digital Earmold Production with the Secret Ear System

What is the Secret Ear System?

The Secret Ear System is a comprehensive software suite designed for CAD/CAM production of earmolds. At its heart lies Secret Ear Designer, a powerful automated modeling tool known for delivering the highest quality and performance available on the market.

Secret Ear Designer is complemented by products that automate the workflow in production from scan to print, including quality control. Cyfex applications integrate seamlessly into your IT infrastructure whether you prefer a stand-alone setup or a deeply integrated solution.

Your advantages

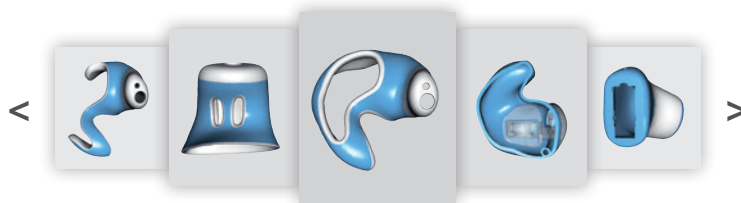

- Start fast with built-in templates, then easily adapt them to create your own styles.
- Get the best of both worlds: AI with full manual control to achieve premium quality earmolds.
- Choose where your data resides — on-premises or in the cloud.
- Scalable licensing for any production size.
- Regular updates keep the software in step with your needs.

Automated Workflow

1. Select ear scans and style.

2. Instantly review AI generated designs.
Tweak manually if needed.

3. Send auto-created models to production.

Levels of System Integration

Start with the classic plug-and-play Automated setup. On its own, Secret Ear Designer slots effortlessly into your IT landscape, delivering instant value. Add Secret Ear Builder and Secret Ear Viewer, and suddenly your operations become smoother, smarter, and more connected. Take it a step further with “Integrated” or “Unattended” implementations — unlocking significant time and cost savings. Choose the level of integration that drives your business forward.

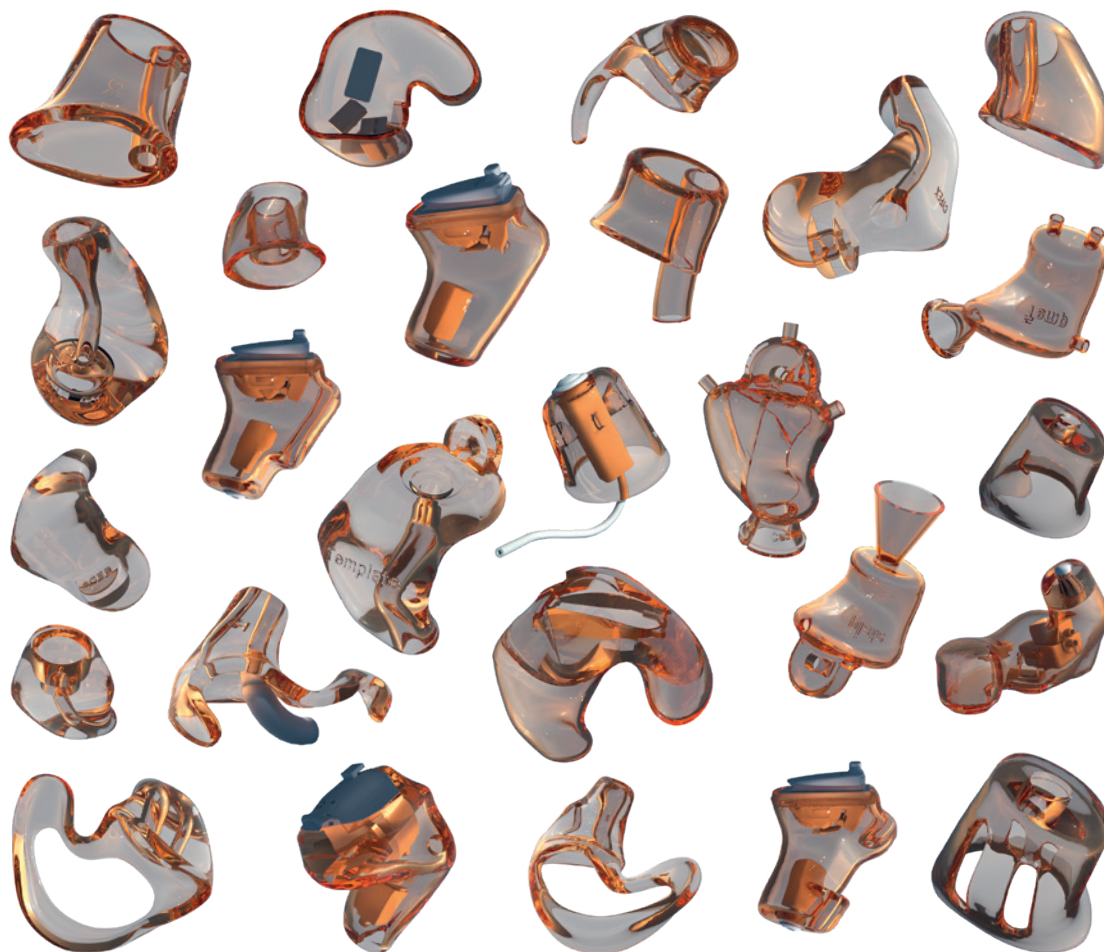

AUTOMATED		
Secret Ear Designer	Secret Ear Builder	Secret Ear Viewer
<ul style="list-style-type: none">- biogeneric AI generates immediate modeling results- manual adjustments are possible	<ul style="list-style-type: none">- fully automated build platform assembly- seamless workflow from design to print	<ul style="list-style-type: none">- empowers quality control- facilitates assembly- brings customer service to the next level

INTEGRATED	
	ERP-Link
	<ul style="list-style-type: none">- launch modeling from ERP system and transfer parameters- error reduction and optimized workflow

UNATTENDED	
	Unattended Execution
	<ul style="list-style-type: none">- automated earmold design in batch mode- scalable without any limits

All Styles

The Secret Ear System allows you to design all earmold styles, including ITC, CIC, IIC, RIC/RITE, in-ear monitors, hearing protection, and BTE molds in various shapes. With a simple click, these designs can also be converted into cast forms. If needed, electronics, filters, wax guards, and other components can be easily integrated into the design.

Version 6.1

Highlights of new Features and Enhancements

Secret Ear Designer

- Full support for shell-based designs.
- Canals automatically adapt to the mold surface, ensuring consistent wall thickness.
- Optimized binaural modeling workflow.
- User-defined properties in Preview, adding flexibility and speed.
- Support for batch modeling.
- Output Presets, to route jobs directly to the correct material or color.
- Customizable 3D-PDF reports, available by default.
- Template generation from one-sided modelings.
- Enhanced Logo Designer.

Secret Ear Builder

- New strategies for optimal support placement.
- Round and tree-like support geometries.
