

Interacoustics Press Release

Interacoustics introduces Equinox Evo & Touch Keyboard

Interacoustics are excited to announce the introduction of the Equinox Evo & Touch Keyboard: a game-changing audiometric solution that will enhance hearing test flows.

The Equinox Evo is a clinical PC-based audiometer designed to evolve with the demands and growth inherent to healthcare systems. It offers a comprehensive test battery, including advanced tests such as the ACT™ test and free field testing supporting up to four speakers.

The innovative Touch Keyboard features the ergonomics of a standalone audiometer and the benefits of PC-based audiometry. Unlike traditional standalone audiometers with numerous physical keys and dials, the keyboard integrates a touch screen with an intuitive user interface as well as dials that provide precise control over your tests and settings.

Audiometry made for children

Equinox Evo offers a dedicated pediatric module with all the tools necessary for performing hearing tests from, from visual reinforcement audiometry and play audiometry all the way to pure tone audiometry.

Using the Touch Keyboard wirelessly, the clinician can bring the keyboard into the booth and the pediatric test screen provides full control of the stimulus output levels, frequency, and visual reinforcers. This simplifies the testing workflow and ensures that clinicians can fully engage with and focus on their patients.

The Equinox Evo also features a range of stimuli designed for pediatric testing, including the Ling-6 and ManU-IRU frequency-filtered sounds.

The Equinox Evo and Touch Keyboard combined are a superior solution that will support all clinicians in their daily work with patients of all ages and demographics.
