

Interacoustics Press Release

Experience Interacoustics Equinox Evo at EUHA 2025 – a new revolutionary audiometric solution

Interacoustics are excited to announce the release of their Equinox Evo audiometer and Touch Keyboard. Together, they make audiometric testing more efficient and patient friendly.

The Equinox Evo integrates seamlessly with VRA systems and features:

- Two-way communication
- Built-in Ling sounds
- Integrated tick sheets
- Reinforcer control sheets

The wireless Touch Keyboard offers intuitive control with ergonomic dials and dedicated screens that show only what's needed for each test – making it easier to stay focused on the youngest patients. In combination, the Equinox Evo and Touch Keyboard are a game-changing solution that will support clinicians in their daily work with children – and other patients that require advanced testing.

If you are attending this year's EUHA conference in Nuremberg, Germany, you can get a demo of the Equinox Evo and Touch Keyboard at the Interacoustics booth. Or you can join one of the scheduled booth talks where Interacoustics' experts will walk you through the benefits of the new solution.
