# Press Release

*October 2026*

# Noah Upgrade Status tops 50 percent!

We are pleased to announce that as of October 2026, over 52 percent of Noah users have successfully upgraded to a supported version of Noah (4.16 or higher). We would like to thank these hearing care professionals for using the time to maintain their Noah software.

However, that still leaves nearly half of Noah users who run unsupported Noah software versions.

**Why upgrade to 4.117?**

Keeping up to date is vital for data security. Remaining on older, unsupported Noah versions will not only make you vulnerable to potential exploits, it will also impede and delay recovery if disaster strikes.

In reality, it is much easier to keep your software up to date rather than waiting.

Once you are upgraded to 4.117, we estimate that there will only be 1 to 2 minor releases in a year, and most Noah updates can be completed in under 15 minutes.

**How to Upgrade**

To upgrade to 4.117, start by checking which Noah version you are currently running. Open Noah and choose *About Noah* from the *Help* menu.

For more information on the best upgrade path for your Noah version, see our website page: Upgrade Path for Unsupported Noah System Versions.

Or follow the procedure provided during the latest Noah download process.

Once you are on the latest Noah version, it will be much easier to stay current for the future.
